**Unified Ordering Model (UOM)  
Volume III - Design**

**For Local Service Ordering Guidelines (LSOG)  
2Q19**

ATIS is a technical planning and standards development organization that is committed to rapidly developing and promoting technical and operations standards for the communications and related information technologies industry worldwide using a pragmatic, flexible and open approach. Over 1,100 participants from more than 350 communications companies are active in ATIS' 23 industry committees, and its Incubator Solutions Program. [www.atis.org](http://www.atis.org)

## 1. Scope, Purpose and Field of Application

### Scope

The scope of this specification is to develop an Alliance for Telecommunications Industry Solutions (ATIS) standard that specifies an interface for the Unified Ordering Model – Local Service Request (UOM-LSR). The interface is specified using the telecommunications Markup Language (an extension of XML), as defined in tML Framework Document (ITU-T M.3030).

### Purpose

This document defines tML Schemas to support the UOM-LSR.

The schemas provide for the three broad functions associated with Local Services Request Ordering; Pre-Ordering, Ordering, and Post-Ordering.

### Application

The tML Schemas presented in this document are based on the packages in UOM, an information model described in UOM-LSR Volume II. The tML Schemas included in this document are: UOM-Base, UOM-LSR-Base, the set of schemas for LSR Pre-Order, the set of schemas for LSR Ordering, and the set of schemas for LSR Post-Ordering. The UOM-Base Schema defines all reusable domain specific and non-domain specific common types and elements that are used in tML Schemas for various UOM applications.

The request, response, notification, acknowledgement, and exception response functions are supported in the UOM (information model in UOM-LSR Volume II) by defining object classes, their properties, and their relationships. While the UOM-LSR Volume II is the technology-independent specification of UOM, UOM-LSR Volume III is a technology-specific definition of the access domain interactions of the information model described in UOM-LSR Volume II. The tML Schemas present the inquiry, service request, notification, acknowledgement, and exception response interactions in the access domain.

## 2. Normative References

The following standards and industry guidelines contain provisions that, through reference in this text, constitute provisions of this American National Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this American National Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below.
