About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

CONTENTS

| | |
|--|----|
| FOREWORD..... | 8 |
| INTRODUCTION..... | 12 |
| 1 Scope..... | 13 |
| 1.1 General..... | 13 |
| 1.2 Published versions of the standard and related namespace names..... | 13 |
| 1.3 Identification of the namespace..... | 13 |
| 1.4 Code Component distribution..... | 14 |
| 2 Normative references..... | 14 |
| 3 Terms and definitions..... | 16 |
| 4 Abbreviations..... | 17 |
| 5 Intended engineering process with SCL..... | 18 |
| 5.1 General..... | 18 |
| 5.2 Scope of SCL..... | 18 |
| 5.3 Use of SCL in the engineering process..... | 19 |
| 5.4 IED modifications..... | 22 |
| 5.5 Data exchange between projects..... | 23 |
| 6 The SCL object model..... | 26 |
| 6.1 General..... | 26 |
| 6.2 The process model..... | 29 |
| 6.3 The product (IED) model..... | 30 |
| 6.4 The communication system model..... | 31 |
| 6.5 Modelling of redundancy..... | 32 |
| 6.6 Data flow modelling..... | 33 |
| 7 SCL description file types..... | 33 |
| 8 SCL language..... | 35 |
| 8.1 Specification method..... | 35 |
| 8.2 Language versions and compatibility..... | 38 |
| 8.2.1 MustUnderstand rules..... | 39 |
| 8.2.2 SCL name space and versions..... | 40 |
| 8.2.3 Incompatibilities to earlier versions..... | 41 |
| 8.3 SCL language extensions..... | 42 |
| 8.3.1 General..... | 42 |
| 8.3.2 Data model extensions..... | 42 |
| 8.3.3 Additional semantics to existing syntax elements..... | 42 |
| 8.3.4 Data type constraints..... | 42 |
| 8.3.5 XML name spaces..... | 42 |
| 8.3.6 Private data..... | 43 |
| 8.3.7 Another XML syntax..... | 44 |
| 8.3.8 Summary: Standard conformance for extension handling..... | 44 |
| 8.3.9 Extension example..... | 44 |
| 8.4 General structure..... | 45 |
| 8.5 Object and signal designation..... | 46 |
| 8.5.1 General..... | 46 |
| 8.5.2 Object designations in an object hierarchy..... | 46 |
| 8.5.3 Signal identifications to be used in the communication system..... | 47 |
| 8.5.4 Signal identifications usable by applications..... | 50 |

| | | |
|--------|--|-----|
| 8.5.5 | Naming example..... | 50 |
| 8.5.6 | Universal Unique Identifier..... | 51 |
| 9 | The SCL syntax elements..... | 52 |
| 9.1 | Header..... | 52 |
| 9.2 | Process description | 58 |
| 9.2.1 | General | 58 |
| 9.2.2 | Voltage level..... | 65 |
| 9.2.3 | Bay level | 67 |
| 9.2.4 | Power equipment..... | 68 |
| 9.2.5 | SubEquipment level..... | 78 |
| 9.2.6 | Process function logical nodes | 79 |
| 9.2.7 | Non power equipment..... | 81 |
| 9.2.8 | Substation section example | 83 |
| 9.3 | IED description | 86 |
| 9.3.1 | General | 86 |
| 9.3.2 | The IED, Services and Access Point..... | 90 |
| 9.3.3 | The IED server | 107 |
| 9.3.4 | The logical device..... | 109 |
| 9.3.5 | LN0 and other Logical Nodes..... | 110 |
| 9.3.6 | Data object (DOI) definition | 113 |

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**COMMUNICATION NETWORKS AND SYSTEMS
FOR POWER UTILITY AUTOMATION –****Part 6: Configuration description language for communication
in power utility automation systems related to IEDs****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). [IEC/IEC and ISO] [takes/take] no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch> or www.iso.org/patents. IEC shall not be held responsible for identifying any or all such patent rights.

This consolidated version of the official IEC Standard and its amendments has been prepared for user convenience.

IEC 61850-6 edition 2.2 contains the second edition (2009-12) [documents 57/1025/FDIS and 57/1041/RVD], its amendment 1 (2018-06) [documents 57/1918/FDIS and 57/1940/RVD] and its amendment 2 (2024-11) [documents 57/2711/FDIS and 57/2733/RVD].

International Standard IEC 61850-6 has been prepared by IEC technical committee 57: Power systems management and associated information exchange.

This second amendment constitutes a technical revision.

The main changes with respect to IEC 61850-6:2009+AMD1:2018 are as follows:

- a) functional extensions concerning the engineering processes to improve files exchange followup, SCL elements identification and control configuration handling, added;
- b) provision of clarifications and corrections. Issues that require clarification are published in a database available at <https://iec61850.tissue-db.com/>. Arising incompatibilities are listed in 8.2.3.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all the parts in the IEC 61850 series, under the general title *Communication networks and systems for power utility automation*, can be found on the IEC website.

This IEC standard includes Code Components i.e. components that are intended to be directly processed by a computer. Such content is any text found between the markers <CODE BEGINS> and <CODE ENDS>, or otherwise is clearly labelled in this standard as a Code Component. In the current version of this document, such indication is made at the beginning of Annex A which identifies the list of XSD files and refers to the code component definition in Subclause 1.3.

The purchase of this IEC standard carries a copyright license for the purchaser to sell software containing Code Components from this standard directly to end users and to end users via distributors, subject to IEC software licensing conditions, which can be found at: <http://www.iec.ch/CCv1>.

This consolidated edition brings two distinct sets of changes:

- 1) Resolved Interop Issues (covered by the table below) which have already followed the technical issues (Tissues) process as described in IEC 61850-1 and have reached the green "status".
- 2) Resolved Editorial Tissues which may have led to interoperability issues.

The resolutions of these issues which lead to these changes are described in greater detail in the Tissue database hosted at <https://iec61850.tissue-db.com/>.

The only new features compared to the previous IEC 61850-6:2009+AMD1:2018 are the introduction of the UUID to identify elements and files, the modelling of controls binding from a client perspective, and the definition of translated labels for elements which may be represented in any user interface. Apart from this, this consolidated edition strictly respects the scope of the original edition.

Technical issues summary

N°, Subject, Clause and Paragraph are as they appear on the Tissue database hosted at <https://iec61850.tissue-db.com/> where all technical issues have been stored from the origin of IEC 61850.

"Subject" defines very briefly the topic under focus.

The Tissues which have been considered are:

| N° | Subject | Clause | Paragraph |
|------|--|------------------------------------|---|
| 1590 | RCB: Offline changes increment ConfRev by 10000? | 9.3.8 | Table 23 |
| 1647 | SDO@count definition inconsistent | 9.5.3 | Table 44 |
| 1648 | DA@count definition needs restriction | 9.5.4.1 | Table 47 |
| 1669 | Incorrect example of header | 9.1 | 1 |
| 1672 | Allow connection Server and ServerAt to the same SCL.Subnetwork | 9.3.2 | Below Table 50 |
| 1674 | Harmonization with 62351-6 | 9.3.2 | Services Element |

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

This part of IEC 61850 specifies a description language for the configuration of power utility IEDs. This language is called System Configuration description Language (SCL). It is used to describe IED configurations and communication systems according to IEC 61850-5 and IEC 61850-7-x. It allows the formal description of the relations between the utility automation system and the process (substation, switch yard). At the application level, the switch yard topology itself and the relation of the switch yard structure to the SAS functions (logical nodes) configured on the IEDs can be described.

While this part describes the language to describe the configuration of IEC 61850 systems, other parts of the standard describe how to configure the system and possible restrictions. Therefore implementations claiming conformance to this standard shall take into account constraints from the other normative references. Some references to the other parts have been included for the purpose of clarification but these references are not all inclusive.

NOTE The process description, which is in this standard restricted to switch yards and general process functions, will be enhanced by appropriate add-ons for wind mills, hydro plants and distributed energy resources (DER).

SCL allows the description of an IED configuration to be passed to a communication and application system engineering tool, and to pass back the whole system configuration description to the IED configuration tool in a compatible way. Its main purpose is to allow the interoperable exchange of communication system configuration data between an IED configuration tool and a system configuration tool from different manufacturers.

IEC 61850-8-x and IEC 61850-9-x, which concern the mapping of IEC 61850-7-x to specific communication stacks, may extend these definitions according to their need with additional parts, or simply by restrictions on the way the values of objects have to be used.

COMMUNICATION NETWORKS AND SYSTEMS FOR POWER UTILITY AUTOMATION –

Part 6: Configuration description language for communication in power utility automation systems related to IEDs

1 Scope

1.1 General

This part of IEC 61850 specifies a file format for describing communication-related IED (Intelligent Electronic Device) configurations and IED parameters, communication system configurations, switch yard (function) structures, and the relations between them. The main purpose of this format is to exchange IED capability descriptions, and SA system descriptions between IED engineering tools and the system engineering tool(s) of different manufacturers in a compatible way.

The defined language is called System Configuration description Language (SCL). The IED and communication system model in SCL is according to IEC 61850-5 and IEC 61850-7-x. SCSM specific extensions or usage rules may be required in the appropriate parts.

The configuration language is based on the Extensible Markup Language (XML) version 1.0 (see XML references in Clause 2).

This standard does not specify individual implementations or products using the language, nor does it constrain the implementation of entities and interfaces within a computer system. This part of the standard does not specify the download format of configuration data to an IED, although it could be used for part of the configuration data.

1.2 Published versions of the standard and related namespace names

The table below provides a reference between all published editions, amendments or corrigenda of this document and the full name of the namespace.

| Edition | Publication date | Webstore | Namespace |
|----------------------------|------------------|--------------------------------|--------------------|
| Edition 1.0 | 2004-03 | IEC 61850-6:2004 | IEC 61850-6:2003 |
| Edition 2.0 | 2009-12 | IEC 61850-6:2009 | IEC 61850-6:2007B |
| Amendment 1 of Edition 2.0 | 2018 | IEC 61850-6:2009/AMD1:2018 | IEC 61850-6:2007B4 |
| Edition 2.1 | 2018 | IEC 61850-6:2009+AMD1:2018 CSV | IEC 61850-6:2007B4 |
| Amendment 2 of Edition 2.0 | 2024 | IEC 61850-6:2009/AMD2:2023 | IEC 61850-6:2007C5 |
| Edition 2.2 | 2024 | IEC 61850-6:2009+AMD2:2023 CSV | IEC 61850-6:2007C5 |

1.3 Identification of the namespace

The namespace associated with this document is an XML schema (XSD) for the System Configuration Language (SCL). The parameters which are identifying the namespace are provided in Table 53:
